

BOC's Authorising Engineer Services.

If your hospital has a medical gas pipeline system (MGPS) installed, then you will need an authorising engineer service to meet the HTM 01-02 standards. The HTM standard stipulates a continuous cycle of assessment, audit, training and review.

Richard manages BOC's Healthcare's Medical Engineering Services team, which provides a full range of services to ensure your hospital's MGPS meets the standards required.

As the Authorising Engineer, Richard will work with your hospital's Authorised Person (AP) to ensure the system is managed in accordance with the standard; ie

- familiarity with the system, its valving, alarms, emergency reserves
- reviewing relevant documentation, management systems
- evidence of up to date training

Authorising Engineer: Richard Maycock

Training Courses:

His team can also deliver the training courses for your hospital's Estates*, EBME, Nurse and Porter staff needed to meet the HTM standard.

(Edexcel certified training centre with *BTEC accredited courses)
