presents

3 in 1 Active

- Auto-emulsifier
- Constitutes the oily phase by it-self
- Improves biological activity

3 in 1 Active

- Auto-emulsifier

GreenSoft can be used as the emulsion base system.

To make your formula with GreenSoft as the emulsion base system you have just to incorporate GreenSoft into your oily phase before creating the emulsion.

Then, you only add it in aqueous phase at 75°C (167 F°) under strong homogenisation. You will directly obtain an emulsion. If you want to create a lotion, a cream or a butter you will just need to adapt the viscosity with the GreenSoft quantity.

In case you would have to add a large quantity of disruptor actives as for example in our EE cream, you can help GreenSoft to stabilize the system, with co-emulsifiers or thickeners.

- Constitutes the oily phase by it-self

GreenSoft, only by itself, can be the oily phase.

GreenSoft contains oils so you don't need other oily components to obtain the emulsion. GreenSoft can constitute your oily phase, but don't worry if you want to add another special oil it's possible.

- Improves biological activity

GreenSoft improves biological activity of your product.

With GreenSoft you can make a large range of products. You can use GreenSoft just for its special feeling, not sticky and really soft with a nice application in a lipstick or in a body butter... Also in creams or milks/lotions, GreenSoft can improve the biological activity and bring a lot of properties: Nourishing, Soothing, Antioxidant, Regenerating... depending on the reference used.

*If you choose GreenSoft 251 Inca Inchi you will repair hair & skin and increase skin suppleness (+66%).
If you choose GreenSoft 461 Camellia you will have a moisturization effect: +60% immediately and +24% after 24h.*

You will find a lot of other properties with GreenSoft 336 Camelina, GreenSoft 390 Apricot, GreenSoft 330 Cotton or GreenSoft 334 Avocado...

Feel free to contact us for creating your own & specific GreenSofts!
