YOUR BRIDGE TO GREENER PACKAGING

PONT Europe appreciates that sustainability issues impact on all of us, as consumers, packaging suppliers and brand owners. We encourage the use of recycled and bio-material packaging in order to play a responsible role in the preservation of our environment. We are dedicated to providing practical packaging solutions that deliver on both responsibility and performance.

CHOOSE rPET - RECYCLED PET FROM PONT

Recycled PET, commonly known as rPET, offers all the same technical advantages of virgin PET. It is made entirely from recycled material, making it a smart choice for responsible packaging solutions.

BIO-BASED PACKAGING IN HDPE & LDPE

Most of the existing PONT Packaging HDPE and LDPE items can be manufactured using bio-based materials. These are offering a sustainable alternative to traditional materials and highlighting a more future-focused approach to packaging. Bio-based HDPE and LDPE provide the same technical performance as their fossil-based alternatives and can be just as easily integrated into the recycling chain.

Material	Food grade	EU pharmacopeia	Colour difference	Recyclable	Identical dimensions
R-PET		-			
R-HDPE	-	-	-		
Bio-based HDPE			-
