PURCY EFFICACY Standardized

St. John's Wort Flower Standardized Botanical Extracts, Certified Quality Since 1971

SUSTAINABILITY RACEABILITY

> Milk Thistle Flower

Decades of Botanical Expertise

Euromed was founded in 1971 by a leading phytopharmaceutical firm, Madaus AG near Barcelona, Spain to provide its parent company and the European pharmaceutical industry with botanical extracts health professionals could rely on in their practices. Since that time, it has been the ingredient manufacturing division of four European pharmaceutical firms and to date is owned by the German pharmaceutical group Dermapharm AG. Euromed is now a worldwide provider of gold standard, premium quality botanical extracts.

The long-standing medical tradition of the use of botanical therapies in Europe has resulted in Euromed's extracts being used in leading clinically tested products. A pharmaceutical firm's large investment in scientific investigation mandates that the quality of the raw materials used in the formulations be produced consistently and supply reproducible results over time. Euromed is GMP certified by the Spanish Medicine Agency as a manufacturer of Active Pharmaceutical Ingredients (APIs). Euromed's principal products are supported by published efficacy studies and include: African plum bark, artichoke leaf, fig fruit, nettle root, milk thistle seed, olive fruit, pomegranate fruit, saw palmetto fruit, St. John's wort herb and valerian root extracts. The effectiveness of these extracts results from the proprietary raw material source, extraction method, extract composition and are not bioequivalent to other similarly named products. This quality investment provides less variation in finished products, reproducibility of clinical studies and greater consumer satisfaction.

Knowledge of Botanical Species and Cultivation

Euromed's agronomists and botanists travel the globe seeking out optimal geographical environments supplying premium "pharmacopeial-grade" botanical raw materials. Seeds from selected cultivars are identified and cultivated following good agricultural and collection practices (GACP). Farmers are trained to follow company cultivation guidelines, including those required for organic cultivation, harvesting and post-harvest drying.

Qualification and periodic certification of raw material suppliers provide comprehensive traceability from the farm to the final extract. Experience and knowledge allow for harvesting of plants at their peak phytochemical concentration and procuring a large supply to satisfy global customer production requirements.

Sustainability practices for wildcrafted plant sources are employed and investments made for supporting conservation activities for species under harvesting pressure such as Pygeum africanum Hook.f. in Africa which is regulated by the Convention on International Trade in Endangered Species (CITES). By qualitatively controlling all steps from seed selection to final extract, we provide full documented traceability, a mandatory criteria of our quality conscious clientele.

Optimal Extraction Technologies

Euromed follows European and US pharmacopeia botanical monograph guidelines for the establishment of its product specifications. This assures that the proper species and plant parts are utilized and verified by the most accurate laboratory test methods available for identity. Specification sheet species test methods are comprehensive and may include: macroscopic, microscopic, TLC, HPTLC, spectrophotometric, HPLC and GC analyses.

Plants contain phytochemicals with complex molecular structures that have complementary bioactivity. Euromed applies different extraction technologies to concentrate the target molecules while preserving the complete phytochemical profile as it exists in nature. For each botanical extract, the manufacturing equipment, botanical raw material, solvent used and inert substances for standardization are qualified and the in-process laboratory test parameters are validated at many critical check points as the manufacturing process progresses. In-process controls are key components of quality control in the manufacturing of herbal extracts.

This includes industrial scale absorption columns coupled with tangential flow filtration with eco-friendly Pure-Hydro Process[™], a proprietary extraction technology that uses purified water as the only solvent, for fruit extracts such as Pomanox® and Mediteanox®, at its Murcia, Spain facility. The Barcelona extraction facility is the recipient of seven industrial certifications, including ISO 14001 for environmental sustainability. This is verification of responsible industrial practices such as recycling botanical waste for compost, animal feed or use in fabric dyes and employment of facility wastewater treatment before being released into the municipal system.

Quality and Innovation for The Future

A commitment to quality today and for the future was demonstrated by the recent construction of a four-story laboratory and innovation center in Barcelona. Two stories of laboratory instrumentation, staffed by experienced technicians, have been dictated by heightened global customer regulatory demands.

Each production batch, from the herb to the final extract, is subjected to a minimum of twenty laboratory tests for identity, potency and potential impurities. These comprehensive tests are part of the PhytoProof® process of quality control and, when recorded on its certificates of analyses, are assurance that the extract batch was manufactured correctly.

Regulatory and judicial actions have motivated widespread industry testing for proper species and discovery of botanical adulteration. Euromed strives to preserve botanical industry integrity by collaborating with international pharmacopoeias and trade organisations working to elevate product quality standards. Display of the PhytoProof[®] logo on product labels is consumer assurance of stewardship of ingredient potency, purity and identity.

A team of pharmacognosists, chemists and pharmacists at Euromed's innovation center are surveying consumer health concerns and developing efficacious botanical derivatives offering natural solutions for addressing these health issues.

Proprietary Ingredients, from Field to Extract

Certified Quality Since 1971

Euromed's trademarked ingredients are produced using the PhytoProof process and supported by published scientific studies. Many marketing fi rms assign a name to their ingredient, but the actual manufacturer and investment in quality are unknown. PhytoProof extracts are designed to be highly bioavailable, providing tangible and reproducible results in clinical testing and fulfi lling consumer expectations. Use of Euromed's trademarked extracts on labels communicates quality and provides consumer confidence that the ingredient has proper identity, purity and potency.

Patented olive fruit extract standardized to hydroxytyrosol (up to 40%).

Patented fig fruit extract standardized to abscisic acid (ABA).

Lemon extract standardized to eriocitrin.

85-95% total fatty acids supercritical extract of saw palmetto fruit.

pomanox°

Patented pomegranate fruit extract standardized to punicalagins (up to 30%).

Artichoke extract standardized to inulin and caffeoylquinic acids.

Spinach leaf extract standardized to 20-hydroxyecdysone.

PATENTED FIG FRUIT EXTRACT.

STANDARDIZED TO VARIOUS CONCENTRATIONS OF ABSCISIC ACID (ABA), BENEFICIAL FOR SUPPORTING PREMIUM BOTANICAL EXTRACTS SINCE 1971

MeDITERRANEANTM fruit and vegetable extracts

HEALTHY BLOOD SUGAR LEVELS

Cynamed[®]

ARTICHOKE FLOWER BUD EXTRACT, STANDARDIZED TO CAFFEOYLQUINIC ACIDS (>4%) AND INULIN (>18%), TO SUPPORT COMPLETE DIGESTIVE HEALTH

PATENTED OLIVE FRUIT EXTRACT, WATER SOLUBLE AND OIL DISPERSIBLE, STANDARDIZED TO HYDROXYTYROSOL CONCENTRATIONS 7% OR HIGHER. ANTIOXIDANT PROPERTIES BENEFICIAL FOR HEALTHY AGING AND CARDIOVASCULAR WELL-BEING

PATENTED **POMEGRANATE FRUIT EXTRACT**, STANDARDIZED TO POLYPHENOLS, **PUNICALAGINS UP TO 30%.** UNPUBLISHED AND PUBLISHED SCIENTIFIC STUDIES PROMOTE USE IN **NUTRICOSMETICS**, AND IN HEALTH APPLICATIONS SUCH AS **SPORTS NUTRITION**, **HEALTHY AGING**, **CARDIOVASCULAR**, **METABOLIC**, **GUT**, **AND COGNITIVE HEALTH**

SPINACH LEAF EXTRACT BENEFICIAL FOR MAINTAINING HEALTHY MUSCLE FUNCTION

NATURAL EXTRACT FROM SPANISH LEMON FRUITS STANDARDIZED TO THE WATER-SOLUBLE FLAVANONE ERIOCITRIN BENEFICIAL FOR VASCULAR AND CARDIOMETABOLIC HEALTH, VENOUS SYSTEM, COGNITIVE FUNCTIONS AND HEALTHY AGING. Ultra flow®

Euromed develops, markets and distributes globally more than 30 standardized botanical extracts
